

HELPING LIVESTOCK PRODUCERS FEED OUR GROWING WORLD IN A SUSTAINABLE, CLIMATE-POSITIVE WAY

TOGETHER, WE AIM TO SUSTAIN

Our collective challenge in animal agriculture is real. Global food production must double by 2050 using the same amount of available land*. But how do we achieve feeding a world with 10 billion people*, in a sustainable way? A way that is good for animals, people, and the environment.

At DPI GLOBAL, We Care® and We Commit to enhancing future food security. We believe creating this sustainability trifecta in animal agriculture is the path to prosperity. We are steadfast in our ongoing commitment to help livestock producers, like you, in the collective mission to feed our growing world. Together, we aim to sustain.

Consistently Produce More High-Quality Animal Protein

Animal production is a highly complex environment. To consistently produce more high-quality animal protein, you make hundreds of decisions every day to address a variety of production challenges. How you try to improve animal performance matters and you know the decisions you make could yield significantly different results. The solutions you select need to be research-proven and shown to deliver a positive animal (and business) impact.

We can help you create a sustainable, integrated plan to address key production challenges standing between you and the animal health and performance your operation needs to achieve to help feed our growing world.

Enriching People's Lives

You care about the way you manage your business. You want solutions that are sustainable for human and animal well-being, the environment – and the health of your business. We know *all* these factors matter to you, and at DPI GLOBAL, we believe you should not have to choose just one or two. We Care[®] and We Commit to the well-being of every animal and person that our DPI GLOBAL team touches.

Our all-natural, sustainable, and research-proven livestock solutions can help you create a safer environment for caregivers and animals, improve water quality, and lower odor emissions, providing cleaner air for humans and animals to breathe.

Making A Climate Positive Impact

By working together, all of us in animal agriculture can realize the goal of doubling global food production by 2050. And we can do this in a sustainable way that makes a climate-positive impact. As we aim to sustain, at DPI GLOBAL, we believe it is time to elevate our expectations. We commit to moving past the goal of simply achieving climate neutrality. It is time to do more!

Our all-natural, sustainable solutions can help your operation make a climate-positive impact by optimizing water quality, applying fewer heavy metals to your land, and increasing the fertilizer value of manure.

**A CULTURE OF
CARE,
A FUTURE OF
COMMITMENT**

How DPI GLOBAL Can Help Your Livestock Operation

Do you need help optimizing animal health and performance in your flock or herd more sustainably? We help livestock customers, like you, feed our growing world in a sustainable, climate-positive way.

We have 55+ years of experience developing and researching all-natural, sustainable feed ingredients. Our innovative solutions are also backed by numerous quality certifications and programs, giving you peace of mind.
